

AMENDMENTS

In the Claims

Please amend the claims as follows:

1. (Original) A printer for servicing one or more print requests comprising:
a print queue for storing data associated with one or more print requests;
a display screen for displaying the content of said one or more print requests; and
control interface for controlling the processing of the print requests.
2. (Original) The printer of claim 1, further comprising executable code stored in a memory, wherein execution of the code by a processor causes the processor to:
in response to user interaction with the control interface, display on the display screen the print requests stored in a first order.
3. (Original) The printer of claim 2, wherein execution of the code by a processor causes the processor to:
in response to user interaction with the control interface, rearrange the order of requests stored in the queue.
4. (Original) The printer of claim 3, wherein execution of the code by a processor causes the processor to:
in response to user interaction with the control interface, select a print request stored in the queue.
5. – 10. (Canceled)

11. (Original) A method for processing one or more print requests submitted to a printer, said printer having a queue, a display, and user interface, said method comprising:

storing the print requests in the queue;

displaying the print requests stored in the queue;

reconfiguring the order of the print requests stored in the queue, in response to user interaction with the user interface;

selecting a print request stored in the queue, in response to user interaction with the user interface; and

printing the selected print request, in response to user interaction with to user interface.

12. (Original) The method of claim 11, further comprising:

deleting the selected print request, in response to user interaction with the user interface.

13. (Original) The method of claim 12, further comprising:

displaying the content of the file associated with the selected print request on the display; in response to user interaction with the user interface.

14. – 16 (Canceled)

17. (Original) A printer for processing one or more printing requests, comprising:

means for storing data associated with said one or more print requests in a first order;

means for storing data associated with said one or more print requests in a second order;

means for displaying the content of the storing means; and

means for displaying the content of said one or more print requests.

18. – 20. (Canceled)
